Let's say I have to collect the day of the week and year, from above example. How can I do it in R? I tried to use strsplit() to split the character strings. `day = strsplit(df$post, split = ",")` `year = strsplit(day, split = " ")` This is what I got: `> day = strsplit(df$post, split = ",")`

```
> day $1 [1] "Sat" $2 [1] "20" $3 [1] "21" $4 [1] "22" $5 [1] "23" $6 [1] "04" $7 [1] "25"
$8 [1] "26" $9 [1] "27" $10 [1] "28" $11 [1] "29" $12 [1] "30" [13] "31" $14 [1] "01" $15 [1] "02" $16 [1] "03" $17
[1] "04" $18 [1] "05" $19 [1] "06" $20 [1] "07" $21 [1] "08" $22 [1] "09" $23 [1] "10" $24 [1] "11" $25 [1] "12"
$26 [1] "13" $27 [1] "14" $28 [1] "15" $29 [1] "16" $30 [1] "17" [31] "18" $32 [1] "19" $33 [1] f678ea9f9e
